Prints dos requisitos no Atlas:

Database User Privileges

Configure role based access control by assigning database users a mix of one built-in role, multiple custom roles, and multiple specific privileges. A user will gain access to all actions within the roles assigned to them, not just the actions those roles share in common. **You must choose at least one role or privilege.** [Learn more about roles.](#)

Built-in Role

Select one [built-in role](#) for this user.

Custom Roles

Select your [pre-defined custom role\(s\)](#). Create a custom role in the [Custom Roles](#) [tab](#).

Specific Privileges

1 SELECTED

Select multiple privileges and what database and collection they are associated with. Leaving collection blank will grant this role for all collections in the database.
